

Gold Terra Resource Corp., formerly TerraX Minerals, is anticipating that their winter drill program will begin around January 18th. The drill program is focused on an area around Kam Point on the south side of Con Mine. The drill program is planned to continue through to April. An ice road has been constructed from the Con Mine Boat Launch to the Kam Point area. This road will be subject to heavy equipment usage and frequent vehicle traffic. The public is asked to remain cautious and visible when in the vicinity of the project to help ensure a safe drill program for all.
